

## **QUESTIONS TO NEPEC**

- 1. What degree of "publication" should be required for the underlying components of the model; i.e., what flexibility should be allowed with respect to the standards and dates outlined above?**
- 2. Does NEPEC agree to review the WGCEP products for the NSHMP during January, 2007?**
- 3. To what degree should the model used for the USGS hazard map update for California correspond with the CWGEP earthquake rate model?**
- 4. Should they be one and the same or is some divergence appropriate or even potentially necessary?**
- 5. Does NEPEC agree to review the WGCEP products for the CEA during August, 2007? If so, should a special NEPEC/CEPEC/SRP meeting be scheduled for this review, perhaps as a one-day session of Workshop 10?**
